

KYLE J GLOVER

San Mateo · kjglover4585@gmail.com · (707) 474-7423 · [Portfolio](#)

SKILLS

Languages::	C#, C++, Python, Typescript/JavaScript/HTML/CSS
Frameworks/Libraries::	ASP.NET Core MVC, Nats-Streaming, React.js, Node.js, Express.js, Kubernetes, Docker
Database::	MySQL, PostgreSQL, MongoDB
Version Control::	Bitbucket, Source Tree, Git

WORK EXPERIENCE

Pet Food Express *Software Engineer*

Concord, California
Mar 2024 - Present

- Architected and maintained a headless e-commerce platform on BigCommerce using JavaScript, HTML/SCSS, Stencil, and React, delivering feature updates across the full stack and improving site reliability for customers at scale.
- Designed and deployed RESTful APIs and microservices in C# / .NET hosted on Azure App Services, replacing VM-based internal applications through a Microsoft Entra (Azure AD) integration for cloud-native authentication and role-based authorization.
- Built and optimized ETL pipelines via Cron Scheduler and Azure Data Pipelines to automate data exchange over SFTP with third-party retail partners (Amazon, DoorDash, Instacart), reducing item-setup failure rate from ~30% to ~2% and expanding product catalog coverage from 72% to 95% across integrations.
- Developed and managed end-to-end third-party integrations from the ground up, owning pipeline design, data analysis, vendor coordination, and validation documentation, directly contributing to a 15% increase in online sales.
- Designed and implemented a Microsoft Fabric data pipeline to extract, transform, and load Application Insights logs into Dataverse for operational monitoring and business intelligence.
- Monitored and troubleshooted integration health across cloud services, SFTP connections, and data pipelines, performing root-cause analysis and resolving incidents to maintain SLA and data integrity across retail partner ecosystems.

Halo Labs *Software Engineer*

Millbrae, California
Dec 2021 - Aug 2023

- Implemented end-to-end multi-threaded applications using C# tailored for supervising automated systems in manufacturing environments. Utilized data binding and WinForms for the user interface, resulting in notable improvements to operational efficiency and control.
- Utilized C++ and OpenCV to develop features aimed at enhancing data quality by analyzing pixel saturation in monochromatic images, applicable for optimizing image processing.
- Revamped the ParticleVue UI to adeptly manage a 250% surge in data output, leading to a dynamic layout overhaul necessitating a comprehensive redesign of both reporting data structures and user interface elements.
- Established infrastructure for embedded devices in new mechanical designs, leveraging C++ to boost instrument efficiency by 250%.
- Mentored and assisted intern projects while completing daily duties.

Color Health *Clinical Laboratory Associate I-II*

Burlingame, California
Aug 2020 - Aug 2021

- Perform specimen receipt, accessioning, and sample transfer using laboratory Liquid Handlers such as Hamilton Star, Hamilton Starlets, and Agilent Bravos.

EDUCATION

National University Msc in Computer Science

La Jolla
2019 - 2021

University of California Santa Cruz BA Biology

Santa Cruz
2013 - 2018
